WEEKLY HEALTH REPORT

NATURE OF THE DATA

The data presented here are taken from the Statistical Reports (Form 86ab) rendered weekly to the Office of The Surgeon General by every hospital and separate dispensary in the continental United States.

Because of the desirability of placing the information in circulation at the earliest possible time following its receipt, figures are in general shown herein as reported. Where there is some doubt as to the accuracy of the reported figures, their verification is promptly requested and the fact that they have been so questioned is indicated by the symbol (!).

MORBIDITY DATA

In this report admission rates are shown for all causes (disease and injury) combined, for all diseases combined, for injuries and for a few specific diseases. These rates are presented on an annual basis to facilitate comparison with corresponding rates in annual and monthly reports. Such annual rates of admission indicate the number of admissions per 1000 mean strength which would occur over a year's time if the current week's experience continued through the year.

The report also shows the number of cases of the more common communicable and certain other diseases of special interest. Appended is a list of cases of the rarer communicable and certain other diseases.

The number of patients remaining in hospital at the end of the week per 1000 strength, as given in this report, furnishes an approximation to the current non-effective rate. The mean number of non-effectives per 1000 strength is given in the summary table for the total United States and for each of the Service Commands.

HOSPITALIZATION DATA

Current hospitalization conditions are presented in terms of bed capacity (normal and total), beds occupied and beds "available vacant." The number of beds "available vacant" is defined as 80% of the total bed capacity less the corresponding beds occupied. The number of beds "available vacant" for each Service Command is the total of the beds "available vacant" for only those stations in which 80% of the total bed capacity exceeds the beds occupied. Beds in dispensaries, convalescent facilities, venereal disease facilities and college training detachments are not included in this report.

In the case of general hospitals there are shown, in addition, the total number of patients admitted and disposed of each week, the number of patients admitted by transfer and the number of battle casualties admitted and disposed of.

EXPLANATORY MATTER

In reading the detail tables, it should be borne in mind that admission rates based on small numbers of cases are not reliable. For this reason the symbol (?) has been placed after admission rates computed on the basis of 5 or fewer cases.

The symbol # has been placed after the names of stations (or groups of stations) where part or all of the data for the current week has not been received and the latest available figures have been substituted.

WEEKLY HEALTH REPORT

WEEK ENDING 30 OCTOBER 1943.

COMMENT ON CURRENT TRENDS

CURRENT MORBIDITY IN THE CONTINENTAL UNITED STATES AS A WHOLE

As indicated in the chart on page 3, the admission rates from all causes and from all diseases combined both decreased during the week ending 30 October 1943, and for the first time this year were both somewhat lower than during the corresponding week in 1942.

As previously noted, the admission rates from all causes and from all diseases combined have been on a relatively low level since about the middle of September. This has in large part, been due to the very low rate of admission from colds, influenza, etc., which so far this fall has shown very little of a seasonal upward trend and remains more than 40 percent under the rate prevailing during the corresponding period in 1942.

The non-effective rate has nevertheless been increasing gradually in recent weeks and for the week ending 30 October 1943 stood at 40 per thousand strength. For the first 44 weeks of 1943, the non-effective rate is more than 10 percent higher than for the corresponding weeks of 1942, while the admission rate from all causes for the first 44 weeks of 1943 is only about 5 percent higher than that for the corresponding weeks of 1942.

VARIATIONS IN MORBIDITY BY SERVICE COMMAND

During the week ending 30 October 1943, there were very large increases in the admission rates from all causes and from all diseases combined in the Military District of Washington. These increases reflect chiefly the much higher rates of morbidity reported from Fort Belvoir. There were also noteworthy increases in the admission rates from all causes and from all diseases combined in the Second Service Command. Decreases in the rates from these causes were registered in the Third and Eighth Service Commands.

Partially because of the very low rate of admission from injury, the Military District of Washington continues to show a low morbidity rate from all causes. The First Service Command also continues to show very low morbidity from all causes, this being due to its extremely low rate of admission from all diseases combined. The Fourth Service Command on the other hand continues to show a very high morbidity from all causes on account of its very high admission rate from injury.

The Seventh and Third Service Commands reported this week lower admission rates from colds, influenza, etc., while the Fifth, First, and Ninth Service Commands reported higher rates.

CURRENT HOSPITALIZATION CONDITIONS

The total bed capacity increased slightly and on 30 October 1943 stood closer to the 350,000 mark. The number of beds occupied on that date was reported to be about 189,000 and the number of "available vacant" beds more than 90,000. There were 38 stations with a total bed capacity of nearly 30,000 which had no "available vacant" beds. Included among them were 12 General Hospitals with a bed capacity of about 17,000 beds.
